OUTLINE

- Motivation, Design, and Technology Issues
- Infrared Diode Laser Based Gas Sensors
- Performance Characteristics of Compact IR Sensors
- Selected Applications of Trace Gas Detection
- Outlook and Summary

Applications of Trace Gas Detection

- Urban and Industrial Emission Measurements
 - Industrial Plants
 - Combustion Sources
 - Automobile
- Rural Emission Measurements
 - Agriculture
- Environment Monitoring
 - Atmospheric Chemistry
 - Volcanic Emissions
- Spacecraft and Planetary Surface Monitoring
 - Crew Health Maintenance & Life Support
- Chemical Analysis and Process Control
 - Semiconductor Industry
- Medical Applications

Absorption Spectroscopy

Beer's Law

$$I_1(\nu) = I_0 \cdot e^{-\alpha(\nu) \cdot L}$$

$\alpha(\nu)$ -absorption coefficient (cm^{-1}), L - path length (cm), ν - frequency (cm^{-1})

Molecular Absorption Coefficient

$$\alpha(\nu) = C \cdot \frac{S}{\Delta\nu} \cdot g(\nu)$$

C -gas concentration (cm^{-3}), S - absorption line strength (cm), $\Delta\nu$ - linewidth (cm^{-1})

$g(\nu)$ - line shape function: Gaussian, Voigt, or Lorentzian profile

Diode Laser Based Trace Gas Detection Methods

- Overtone Laser Spectroscopy
- Tunable Infrared Diode Laser Absorption Spectroscopy
 - Lead salt diode lasers
 - Mid-infrared diode lasers
 - Quantum Cascade - DFB lasers
- DFG Based Laser Spectroscopy
 - Optical frequency conversion of two diode lasers in a NLO material

Difference Frequency Generation

MID-IR POWER: $P_i \sim C \cdot P_{\text{PUMP}} \cdot P_{\text{SIGNAL}} \cdot L \cdot h(\zeta, \mu)$

$$C = (\omega_i/n_i)^3 d_{\text{eff}}^2, \mu = k_S/k_P, \zeta = L/b$$

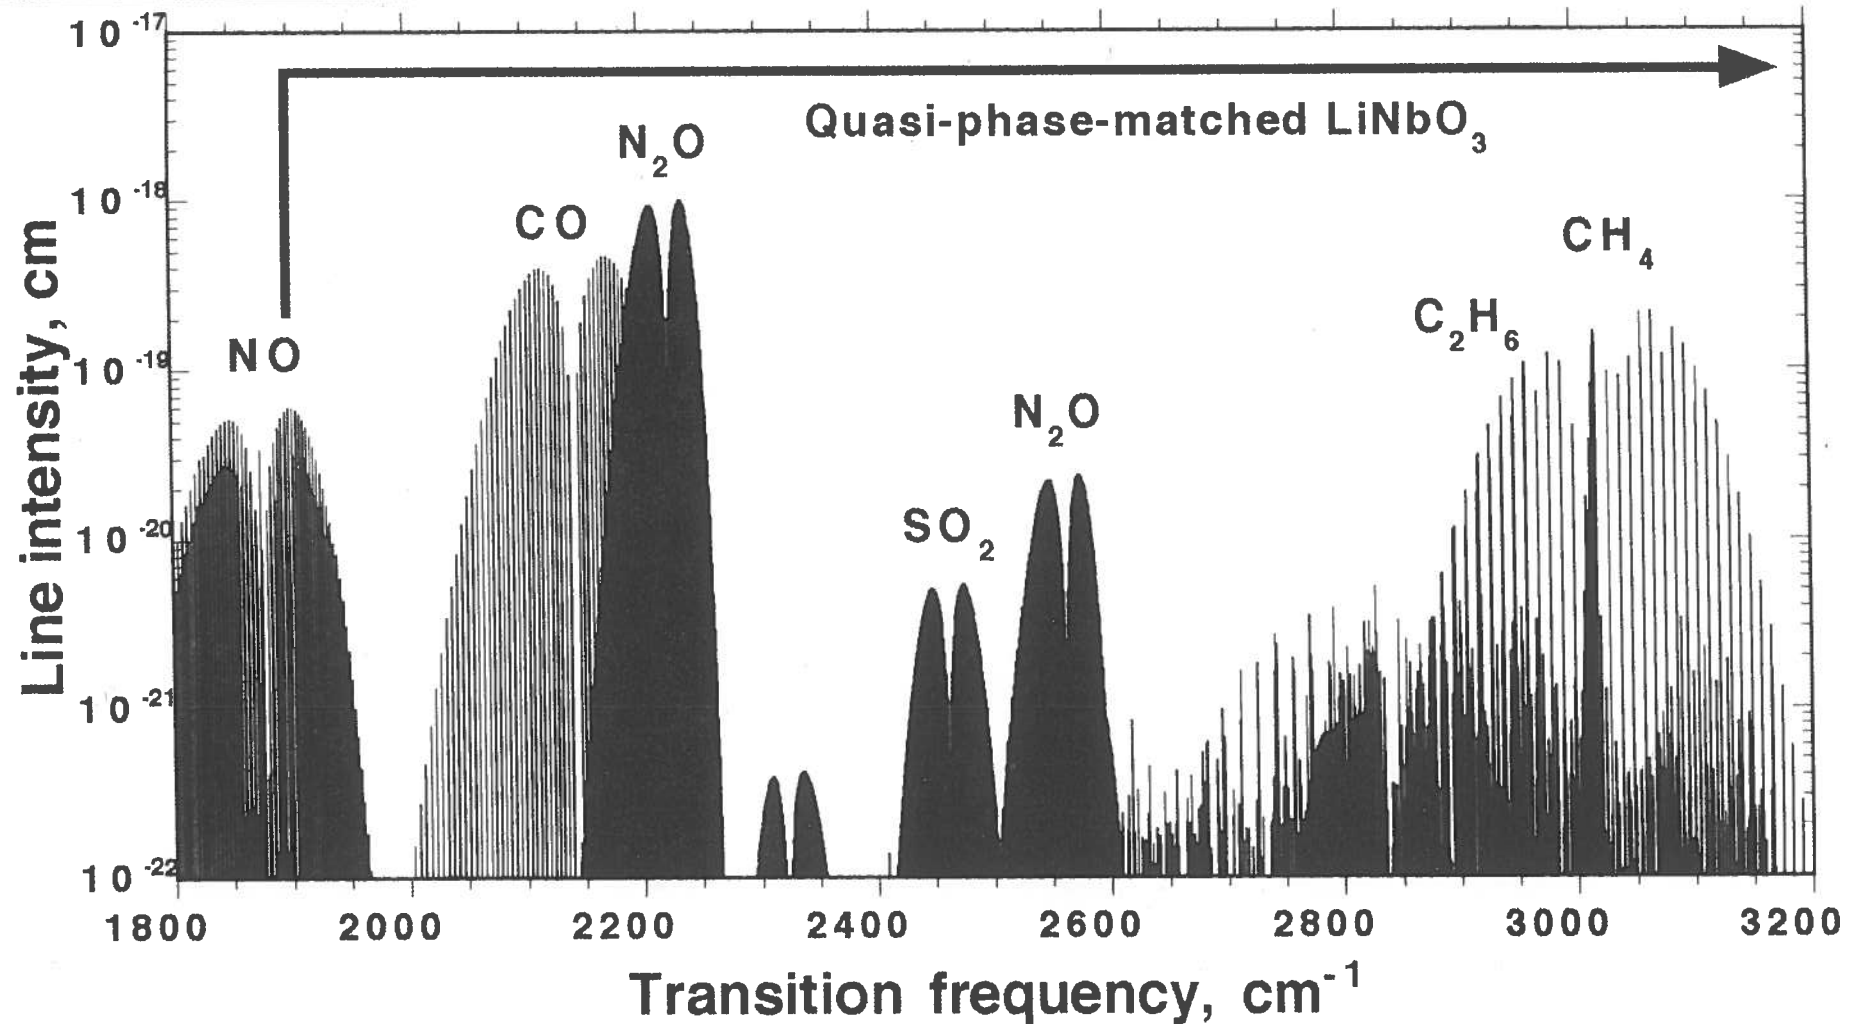

EXAMPLE: FOR PPLN AT $3.5 \mu\text{m}$

$C \sim 450 \mu\text{W} / \text{cm} \cdot \text{W}^2$

$\sim 3 \mu\text{W}$ for 6mW and 540mW LD pump sources

SURVEY ABSORPTION SPECTRA OF SOME ATMOSPHERIC TRACE GASES

Design Features of CW DFG Sensor

- Adequate Mid-infrared DFG Power
- High Sensitivity (ppb concentrations)
- High Selectivity (<30 MHz)
- Wavelength Tunable
- Single and Multiple Trace Gas Species
- Fast Data Acquisition and Analysis
- Room Temperature
- Non-invasive, Point or Remote Monitoring
- Compact, Lightweight and Robust
- Power Efficient
- No Consumables , Low Maintenance and Cost Effective

DFG Pump Source Combinations

1

DBR-DL
1083nm
P=50mW

OR

Nd:YAG
1064nm
P=700mW

Fabry Perot DL
@ 809-870 nm
P=100mW

P = 5 μ W, 1.6 μ W
Discrete λ

► FP DL - Mode hop issues
Discrete optics - alignment critical

2

DBR-DL
1083nm
P=50mW

ECDL
814-870 nm
P=25mW

Yb fiber
amplifier
P=1W

P = 3 μ W
 λ = 3.2 - 4.4 μ m

3

DBR-DL
1083nm
P=50mW

ECDL
1530-1570 nm
P=3mW

Yb fiber
amplifier
P=1W

P = 11-30 μ W
 λ = 3.5 - 3.7 μ m

4

α -DFB-DL
1066nm
P=500mW

ITU-Grid
DFB-DL
1572 nm

Er fiber
amplifier
P=40mW

P = 12 μ W
 λ = 3.3 - 3.6 μ m

5

DBR-DL
1083nm
P=50mW

ITU-Grid
DFB-DL
1530-1570nm

Yb fiber
amplifier
P=1.6W

Er/Yb fiber
amplifier
P=0.5W

P = 700-900 μ W
 λ = 3.4 - 3.8 μ m

Schematic of DFG multi-component gas sensor

Masaya Volcano Emissions Campaign April 2000

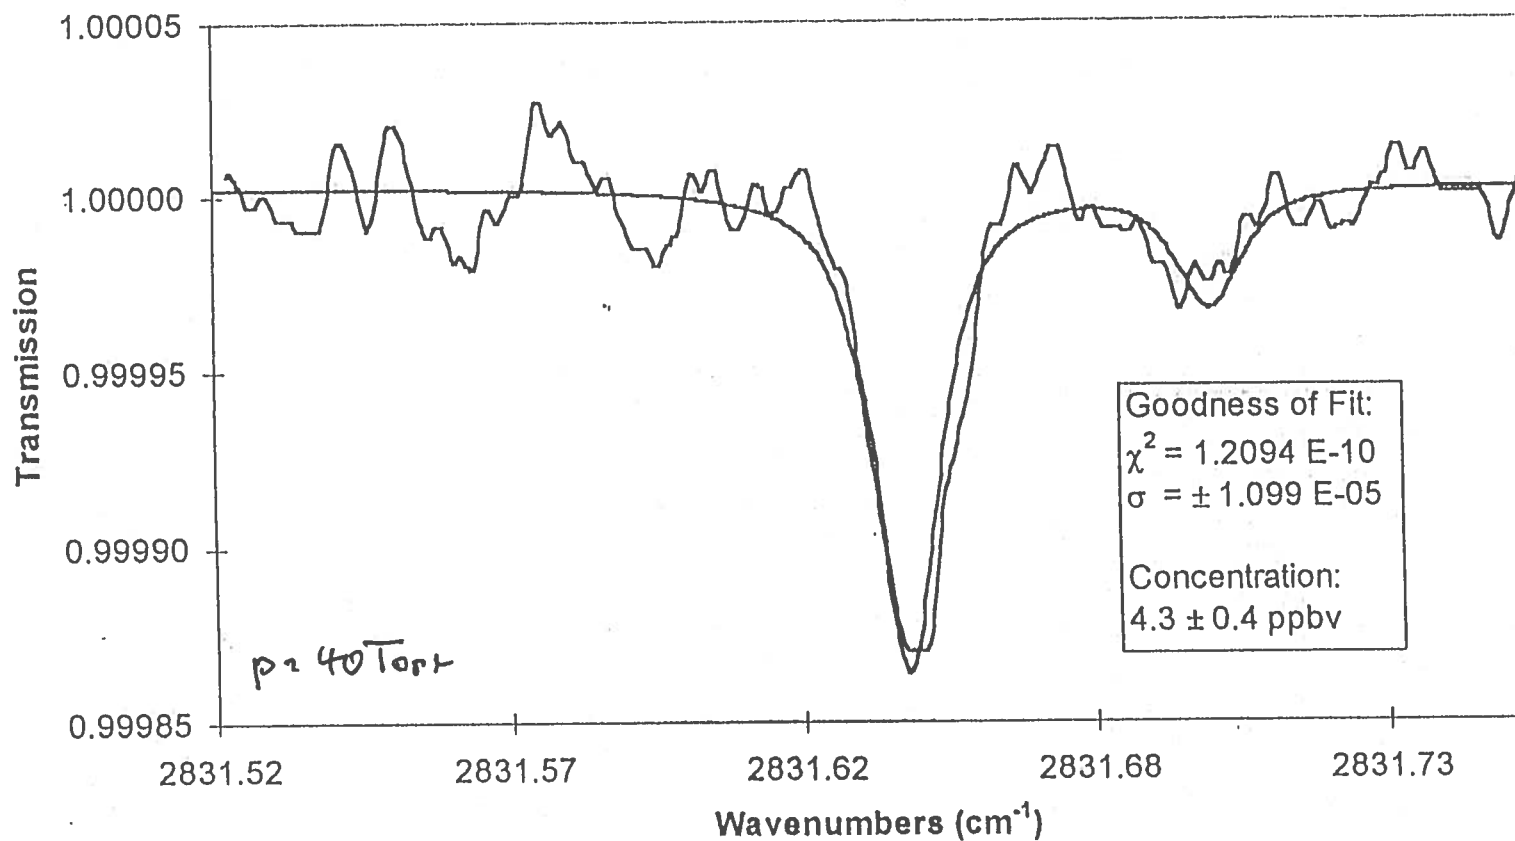

Masaya Volcano Emissions Campaign April 2000

DFG Spectroscopic Source at 3.53 μm

H₂CO Detection in Ambient Air at 3.53 μm

9 Day H₂CO Detection at 3.53 μm in Houston

Key Characteristics of Quantum Cascade Lasers

- Laser wavelengths cover entire range from 3.4 to 17 μ m determined by layer thickness of same material
- Intrinsically high power lasers (determined by number of stages)
 - CW: 0.2W @ 80 °K, ~100 mW single frequency
 - Pulsed: 0.5W peak at room temperature, ~15 mW avg. @ 300 °K
- High Spectral purity (single mode)
- Wavelength tuning by current or temperature scanning
- High reliability: low failure rate, long lifetime, robust operation and extremely reproducible emission wavelengths

QC - distributed feedback laser

grating selects single-mode, tunable by temperature

$$\lambda_{em} = 2 n(T) \Lambda_{grat}$$

QC - distributed feedback laser

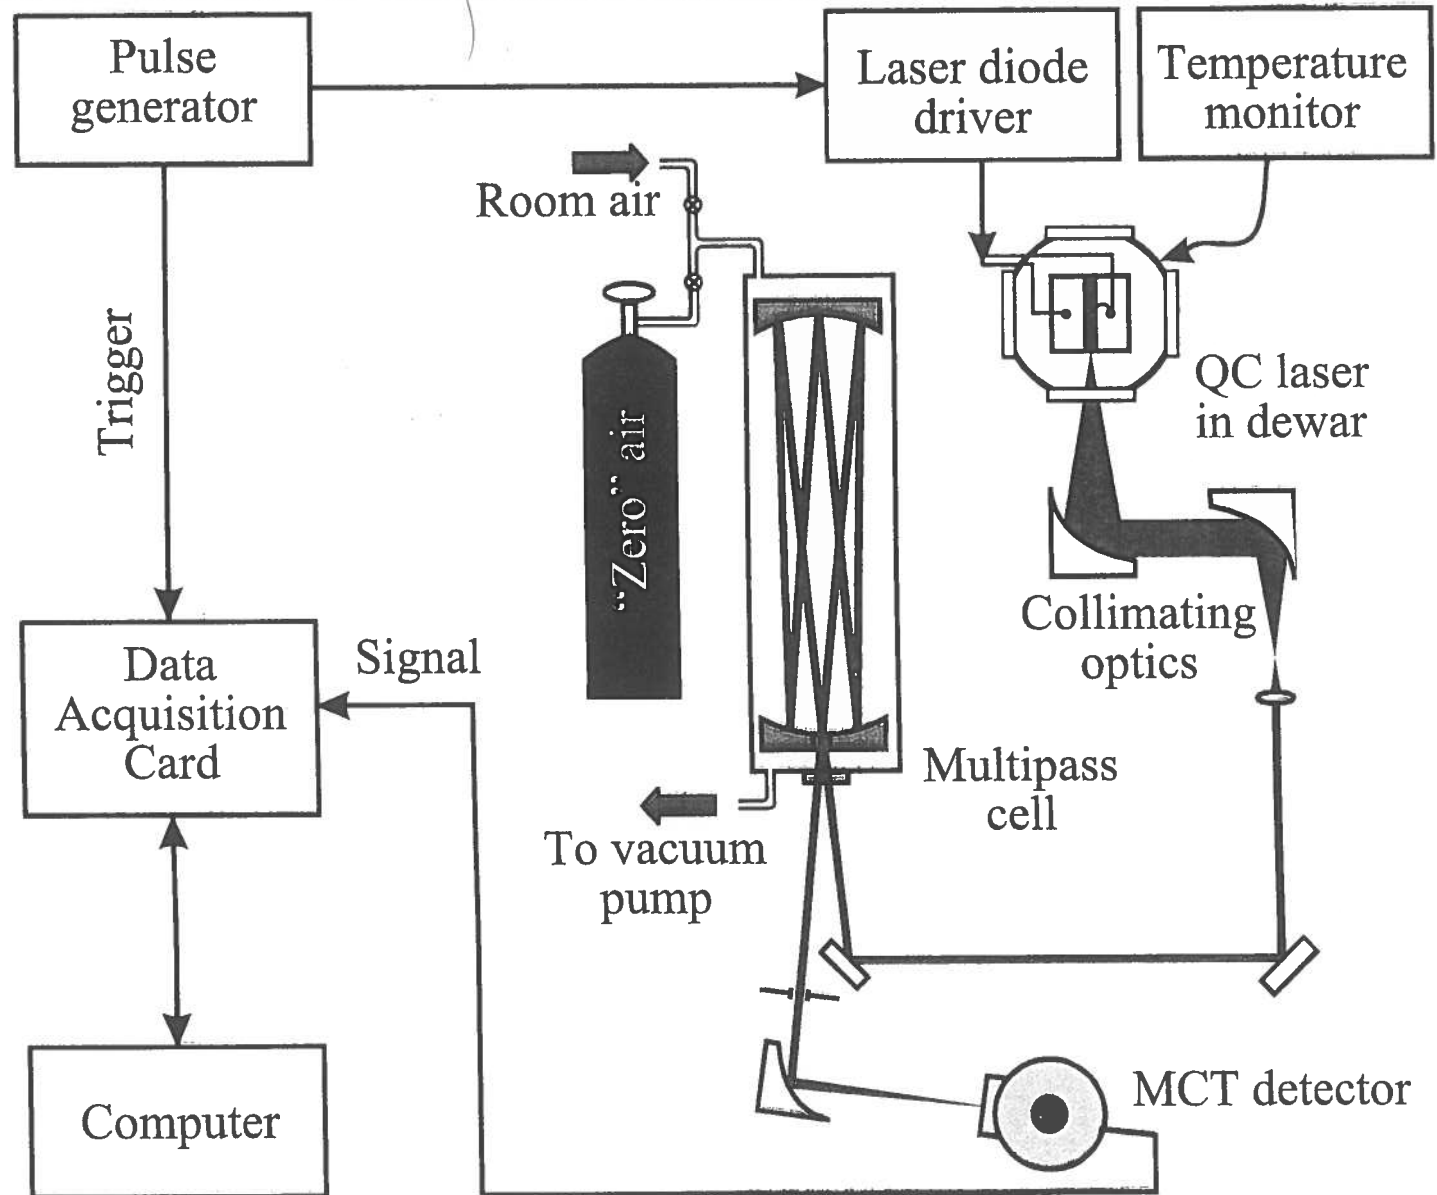

grating selects single-mode, tunable by temperature

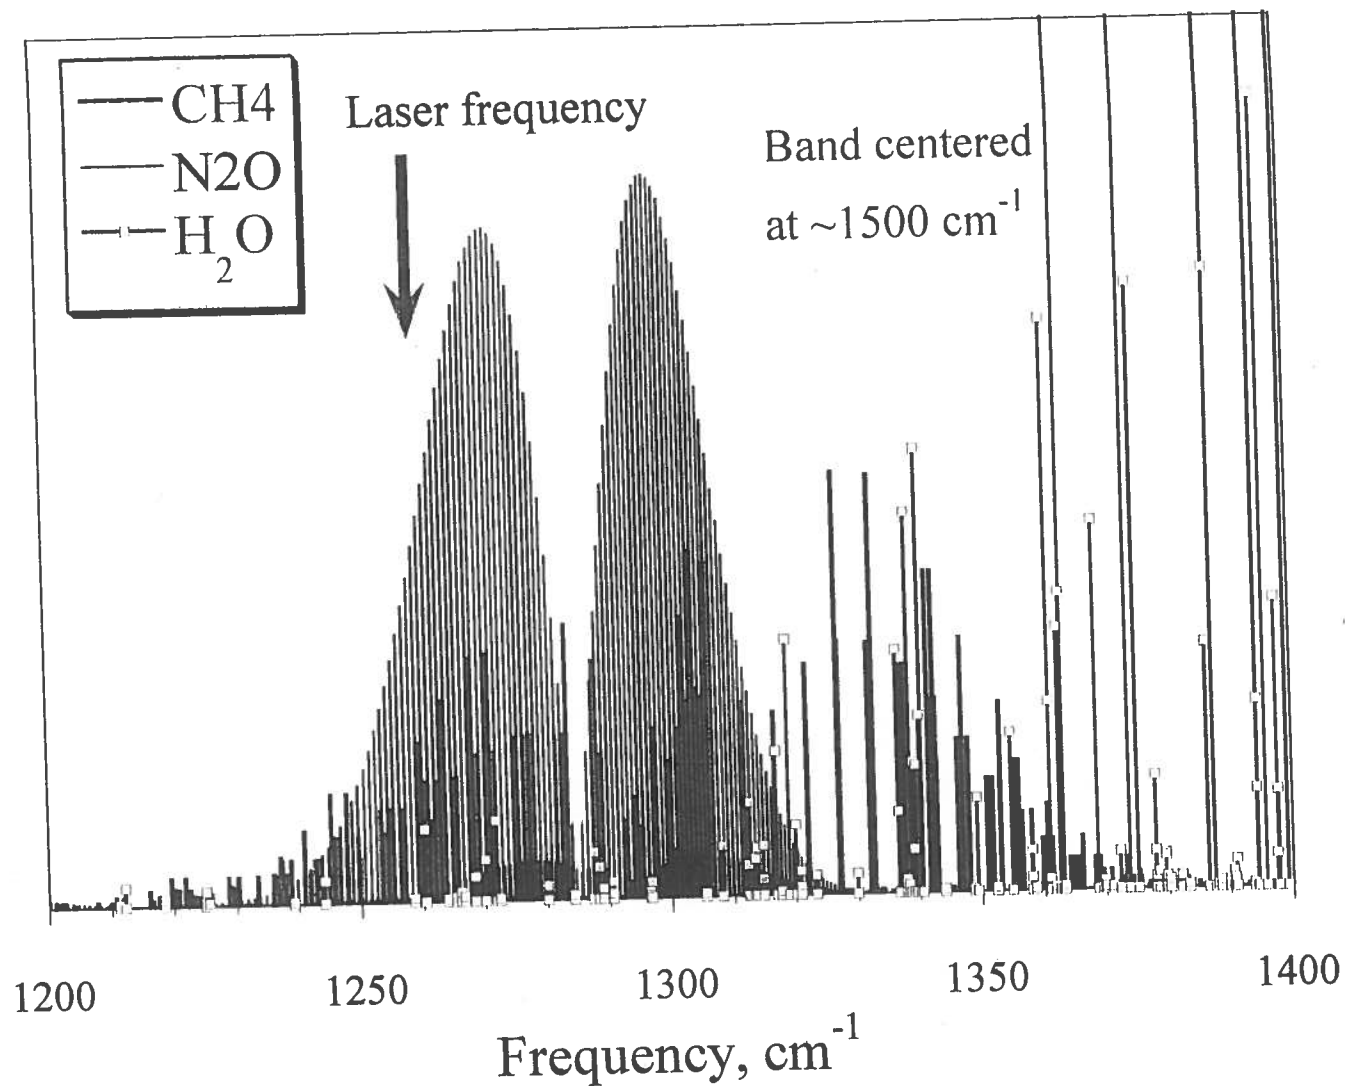

$$\lambda_{em} = 2 n(T) \Lambda_{grat}$$

Trace Gas Detection with a Multipass Cell

CH₄, H₂O and N₂O Absorption Spectra

Absorption Spectrum of Room Air

Summary

- Diode Laser Based Trace Gas Sensors
 - Compact, tunable, robust (alignment insensitive)
 - High sensitivity ($<3 \cdot 10^{-5}$) and selectivity (<60 MHz)
 - Fast data acquisition and analysis
 - Detected trace gases: CH_4 , H_2CO , NO_2 , N_2O , HCl , CO_2 , CO , NO , H_2O , SO_2 , isotopic species of $^{12,13}\text{C}$, $^{16,17,18}\text{O}$, $^{35,37}\text{Cl}$
- Current Applications in Trace Gas Detection
 - H_2CO and CO : NASA-JSC, NCAR and EPA
 - CH_4 : NOAA, NASA-JPL, and gas industry
- Future Directions
 - New DFG pump lasers: Fiber and tunable DBR diode lasers
 - Cavity enhanced spectroscopy
 - Longer mid-IR wavelengths (5-16 microns) with orientation patterned GaAs
 - Medical Diagnostics: CO , NO , CO_2 and NH_3
